

# HOW TO USE PROTOCOL MANAGER FOR BODY MRI CASES

- **First, you need to set up your “MR” filter as illustrated below...**
  - Log into Imagecast

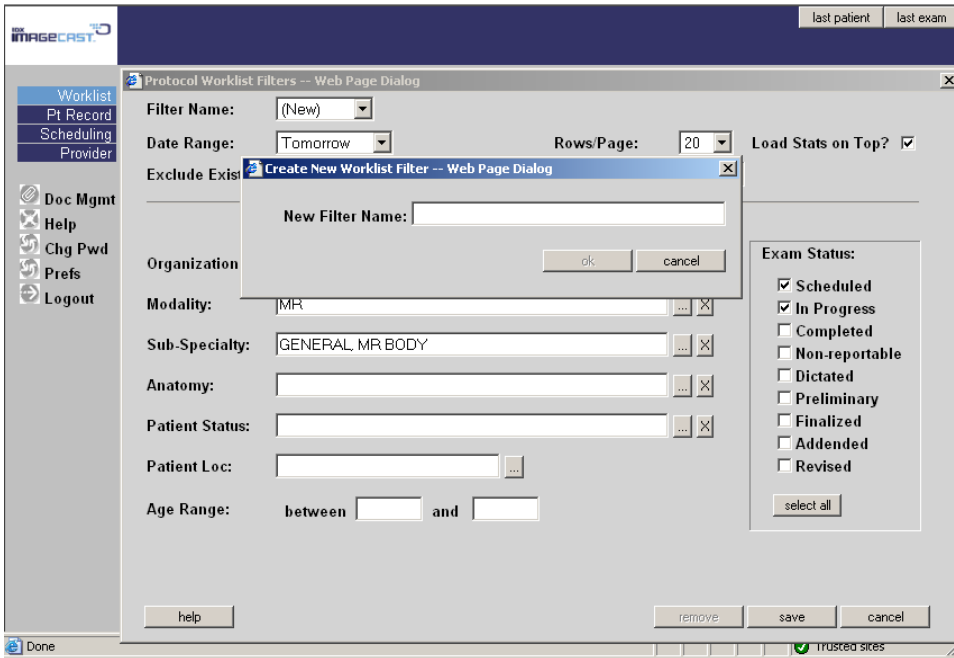

- First, click “Worklist”
- Next, click “Protocol”
- Finally, click “filters”. When you do, the following dialog box will open...

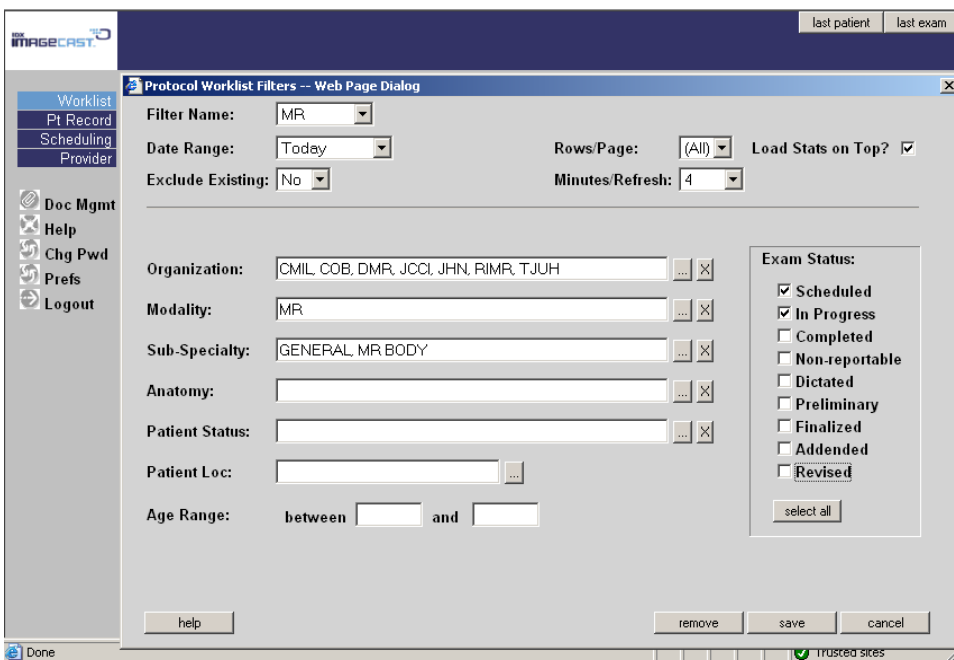

- Under “Filter Name,” select “(New)”
- Under “Date Range,” select “Today”
- Under “Organization,” click the ellipsis (the 3 dots towards the end of the line, to the left of the “X”)

- Select “CMIL, COB, DMR, JCCI, JHN, RIMR, TJUH”
  - Click “OK”
- Under “Modality,” click the ellipsis
  - Select “MR”
  - Click “OK”
- Under “Sub-Specialty,” click the ellipsis
  - Select “GENERAL, MR BODY”
  - Click “OK”
- Under “Exam Status,” select “Scheduled” & “In Progress”
- Under “Exclude Existing,” you can chose:
  - “Yes” if you want to see only the studies that need a protocol
  - “No” if you want to see all studies that have and do not have protocols
- Click “save”. A dialog box will open as indicated below...

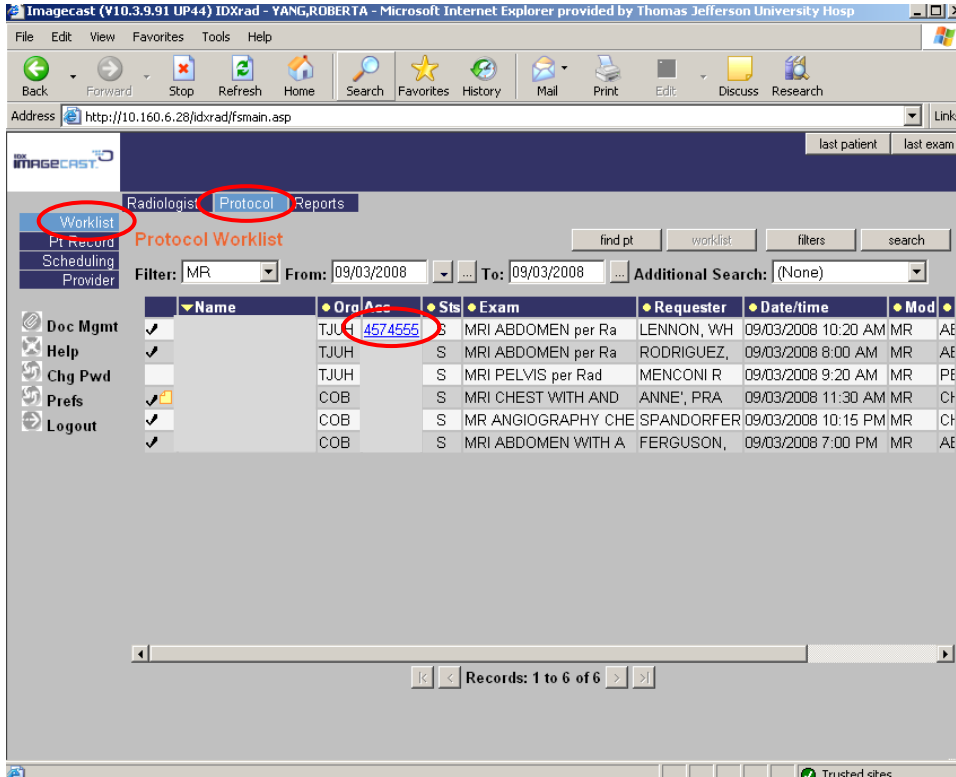

- Under “New Filter Name,” you can choose whatever name you’d like. I chose “MR”
- Click “ok”

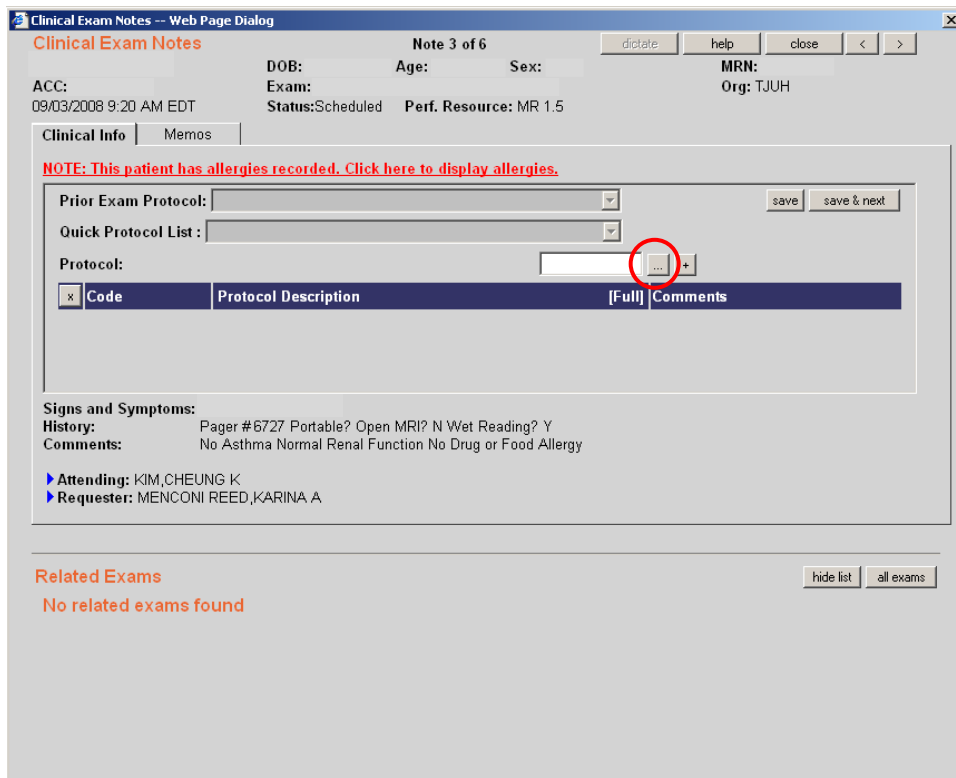

- At the conclusion, above is how your filter should look (except possibly the “Exclude Existing” option)

- **How to protocol a study using Protocol Manager**

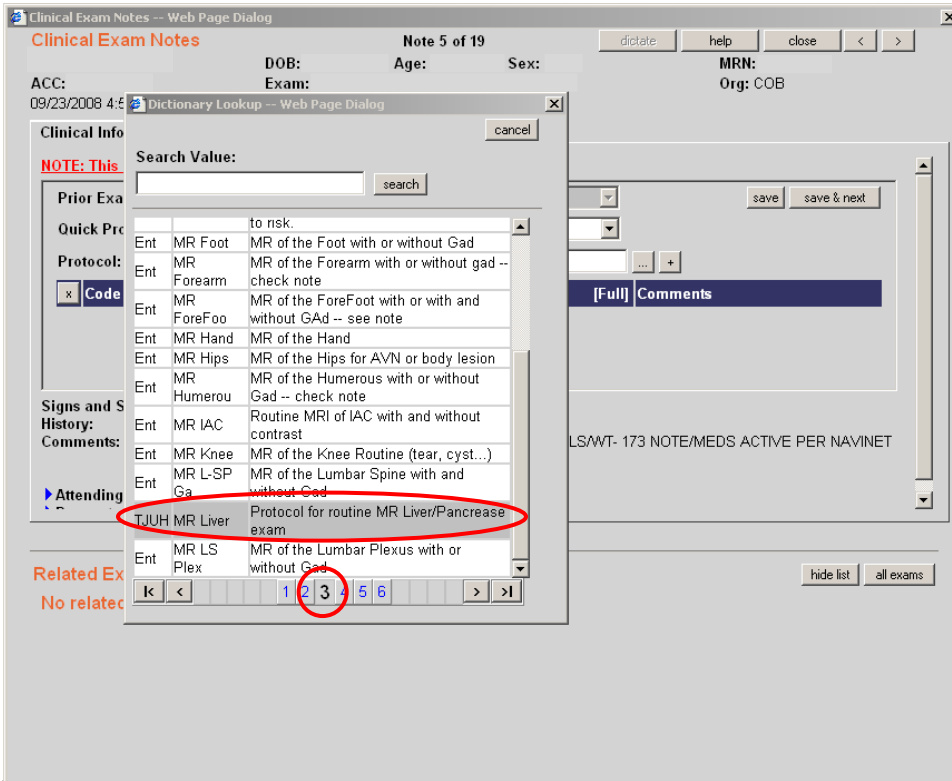

- Log into Imagecast

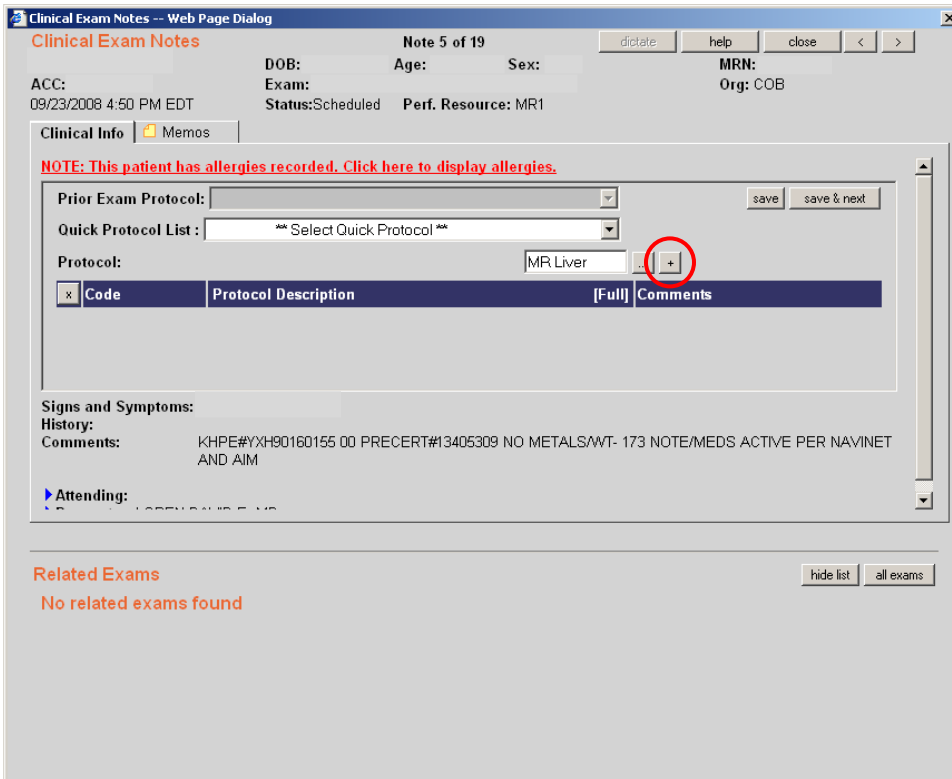

- Click "Worklist"
- Click "Protocol"
- Select an accession number

- Click the ellipsis as indicated above...

- Search through different pages for the appropriate protocol.
- Click on desired protocol (see “Additional Information About Protocol Code Choices...” section of this instruction pamphlet for locations of most frequently used options)

- Click “+” as indicated above...

- Type in the specific protocol in the “Comments” box
  - Address:
    - Use of Gadolinium
    - Dose of Gadolinium if using Multihance or if doing an angiogram/venogram
    - eGFR (or the need for a more recent Cr if needed)
  - Click the circle to the left of the protocol code (in this case “MR Liver”) to make sure it is selected
  - Click “save”
  - Click “close”
- If you want to erase the protocol, select the protocol code and click on the “x” to the right of “Code,” as marked by the green arrow above

- You can use the “Memos” section to document any calls that you make to clinicians (clarify an indication, etc...)
  - It may be helpful to include the phone number you used for future reference
  - Click “save” after you have finished your memo

- Explanation of symbols
  - A *checkmark* in the left column means that this study has a protocol
  - The *square yellow icon* in the left column means that a technologist or radiologist has typed in a memo
  - The *paper clip* in the left column means that documents were scanned and attached to the entry
    - To view the scanned material, select the accession number

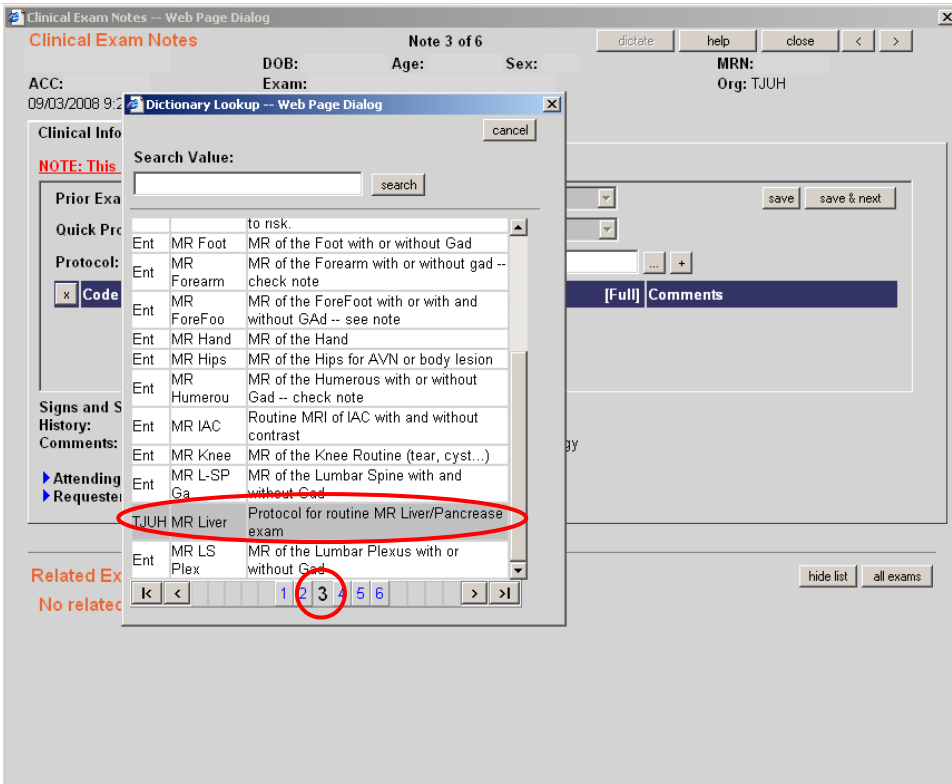

- Click on the paper clip, as indicated above, and another screen will appear

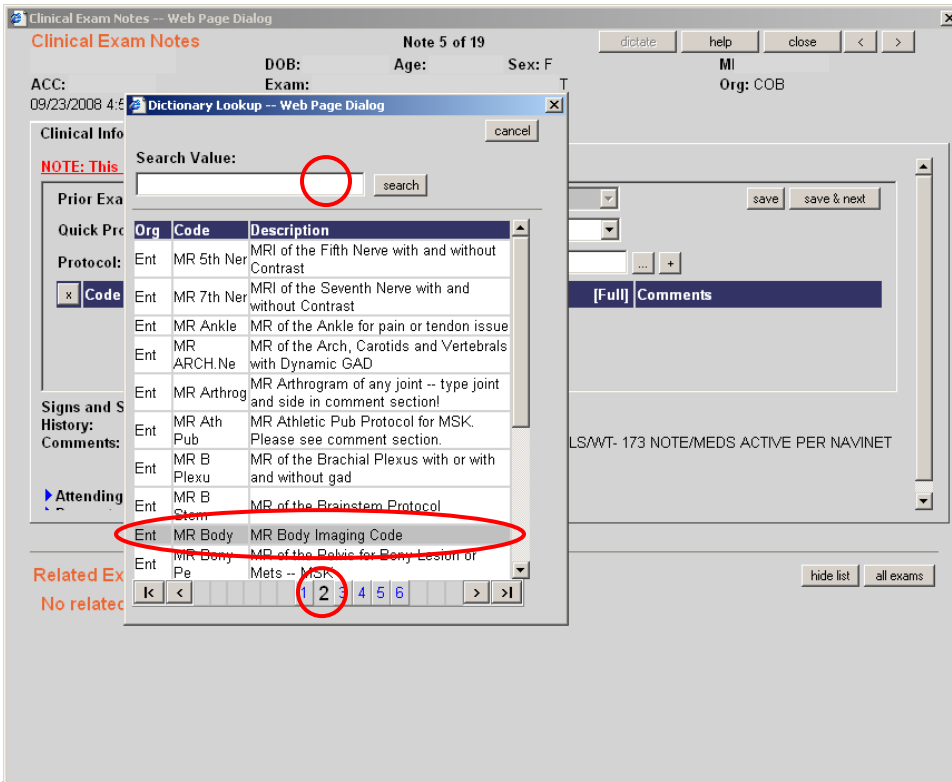

- Select the line you want by placing a check in the box to the left of the "ID" number
- Click view, and the scanned documents will appear in a separate window

- **Additional Information About Protocol Code Choices...**

- Not all specific protocols are listed as choices. Sometimes you have to pick the closest approximation.

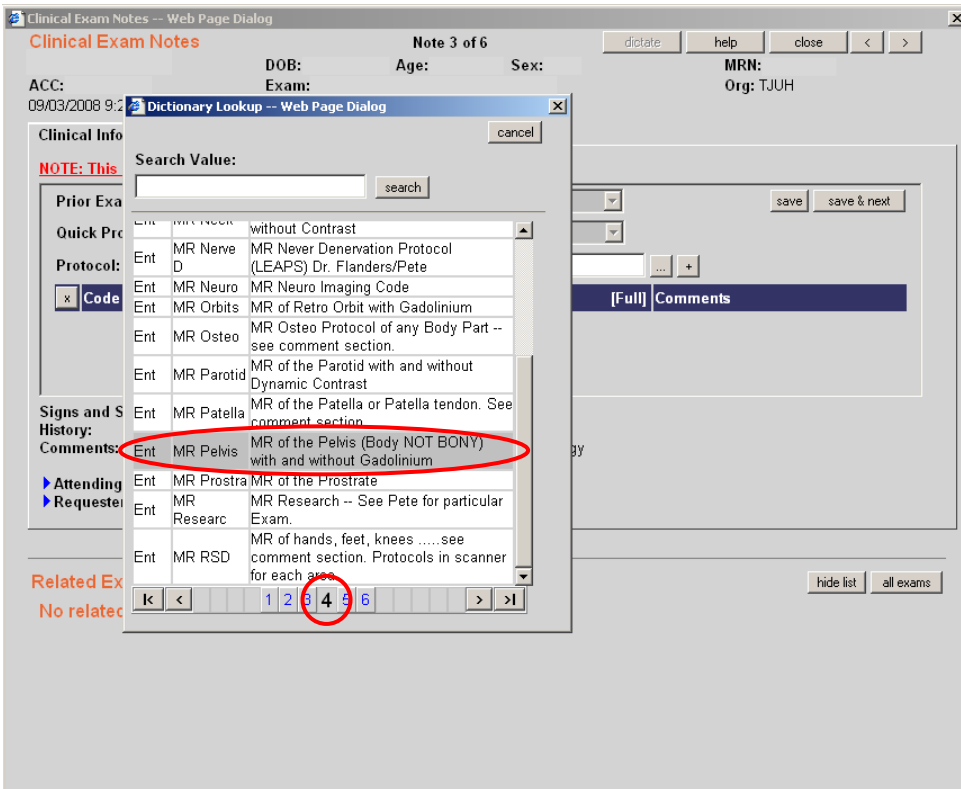

- “MR Liver”
  - This code can be used for liver and pancreas protocols

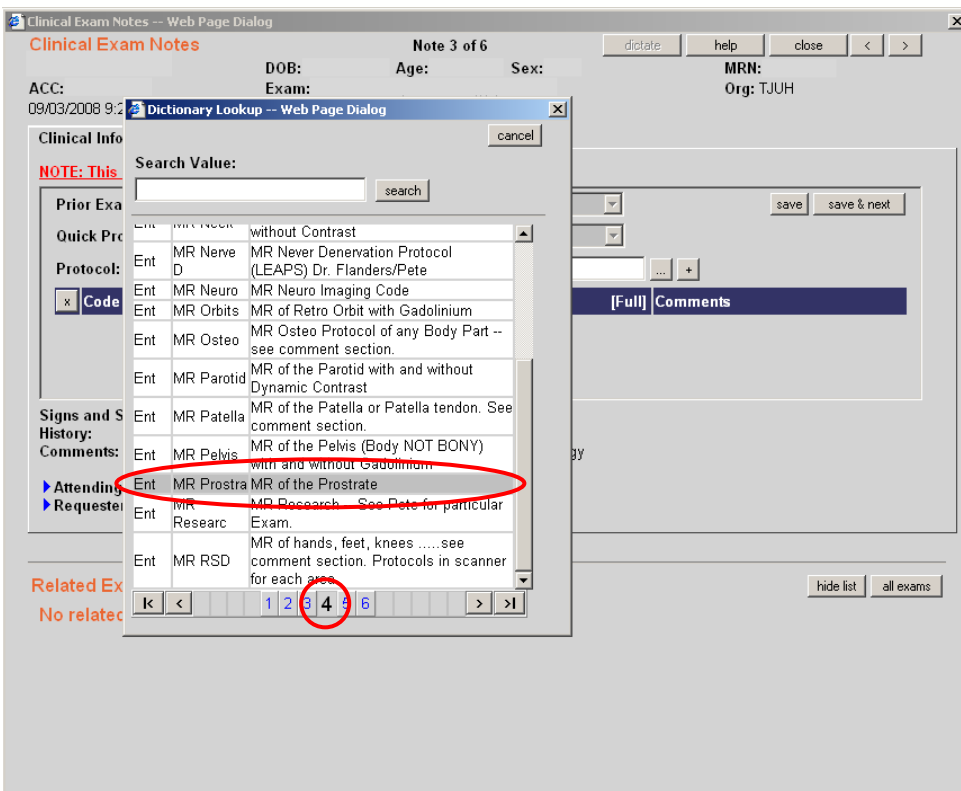

- “MR Body”

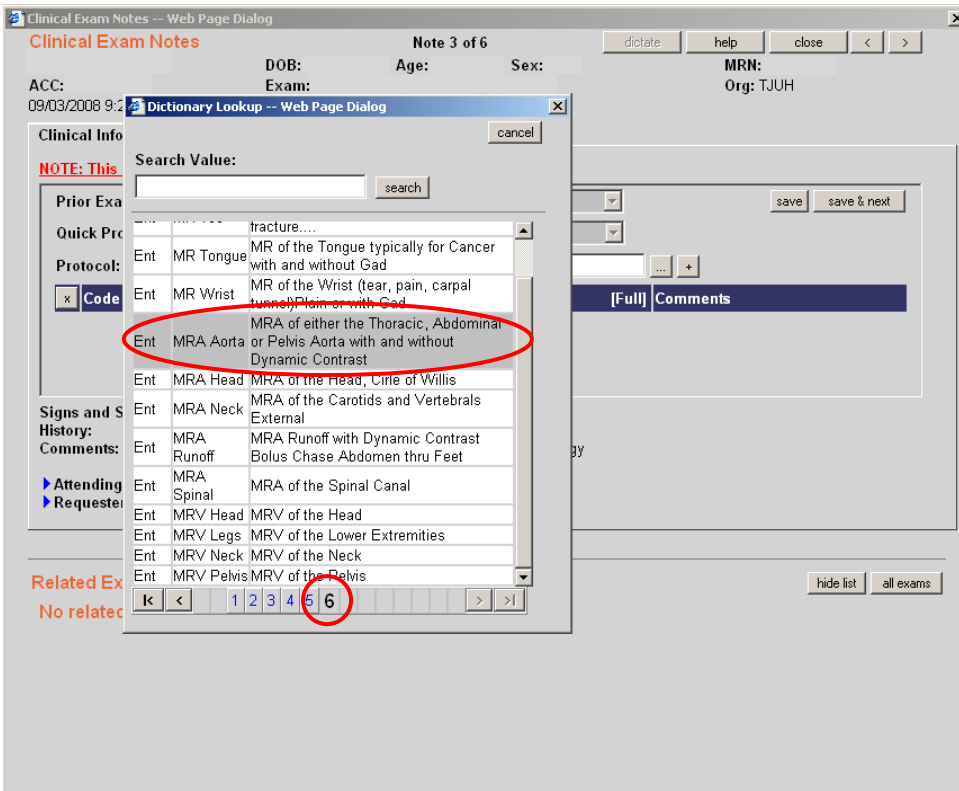

- This code can be used for renal and adrenal protocols (and almost anything else you can't fit into a neat category)

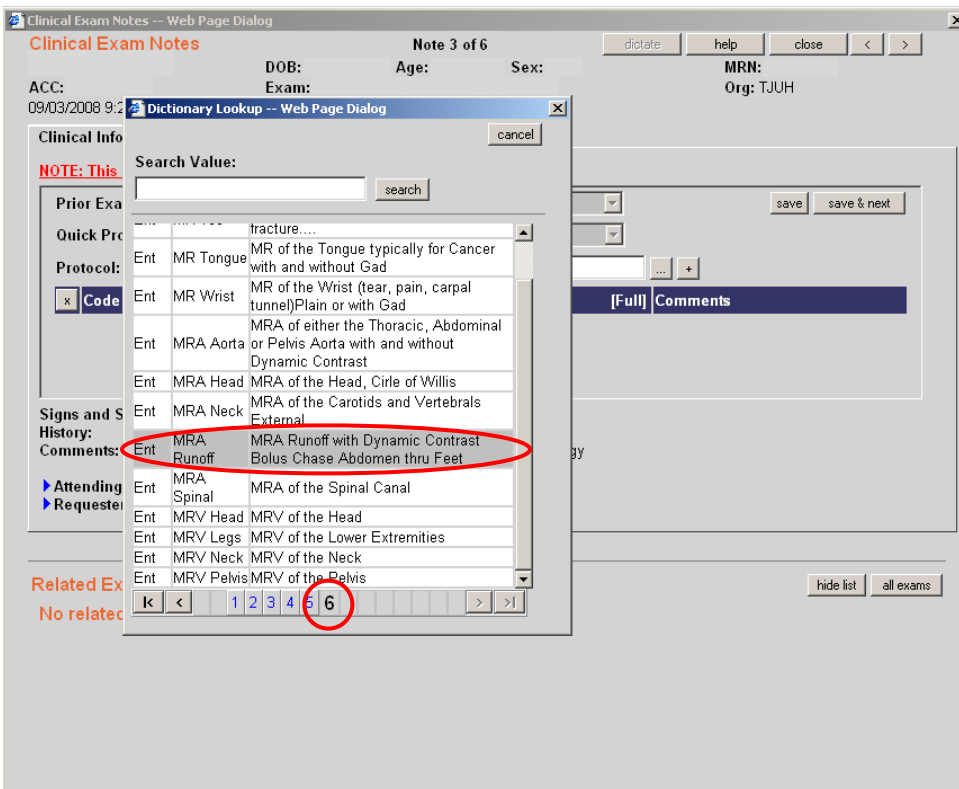

- “MR Pelvis”
  - This code can be used for female pelvis, pelvic floor, and perineal fistula protocols

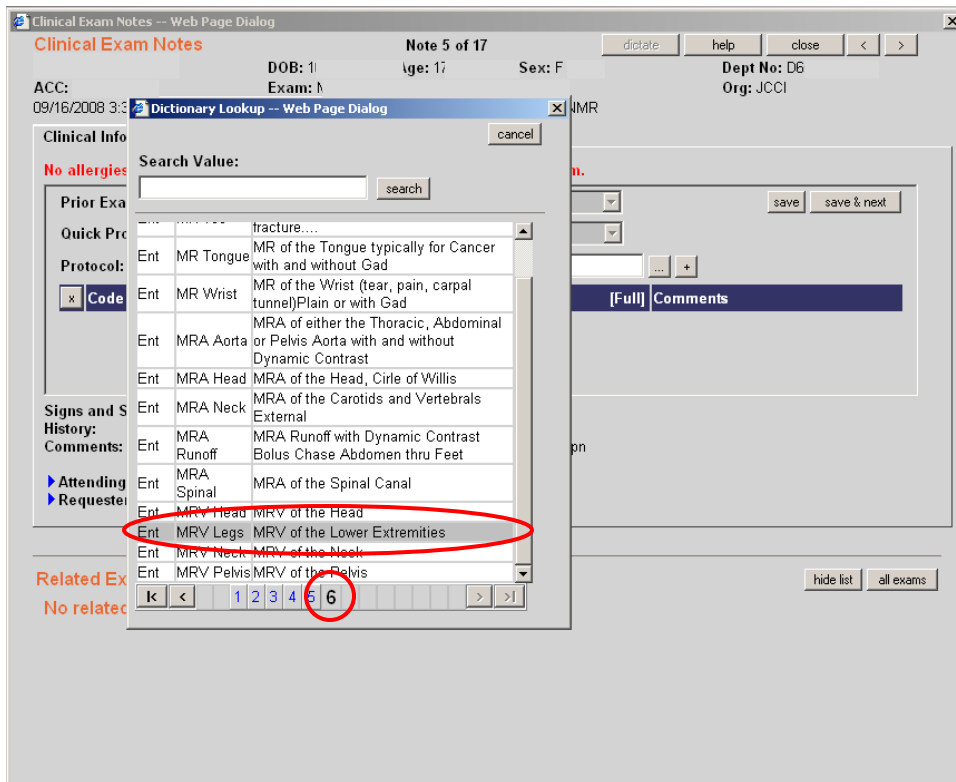

- “MR Prostate”
  - This code can be used for prostate protocols

- “MRA Aorta”
  - This code can be used for thoracic aorta, pulmonary artery, abdominal aorta, mesenteric arteries, renal arteries, and pelvic arteries

- “MRA Runoff”
  - This code can be used for lower extremity arterial run-off’s

- “MRV Legs”
  - This code can be used for pelvic and lower extremity venous studies
